- New detailed yearly view (yearvie3.asp)
- New daily report (dayview9.asp; ShowDayReport = True in calagent.inc)
- New weekly report (weekvie9.asp; ShowWeekReport = True in calagent.inc)
- Monthly, quarterly, and yearly view new with vertical lines between weeks
- Better stability in multi-services environments
- Auto-recovery in cases where scan task hangs in O365 environments
- Recovering calendar scanning where it was left of when task is stopped
- Rescanning of calendars at the end of the scan cycle in case there are pending meeting bookings
- Fixed some time zone issues
- Improved handling of deadlocks in the database
- Improved Office 365 integration
- Many other improvements and fixes

New features of V6.1:

- Accessibility for vision impaired people
- Displaying Room Capacity
- Improved Office 365 integration
- Finnish language support
- Possibility to configure the detailed daily view to show the Organizer instead of the subject and to define background and text colors for categorized meetings
- Functionality to automatically repeat meetings on certain weekdays
- Possibility to show only past x days (or current day) and one month into the future in month and detailed month views
- Many other improvements and fixes (e.g. yearly view export and problems in meeting booking functionality

New features of V6.0

- Possibility to modify meetings directly in the AgendaX views
- Cloud Computing: Possibility to use Outlook MAPI vs. Exchange Server MAPI, to allow scanning hosted mailbox calendars with HTTPS
- Possibility to scan Exchange servers with users on multiple time zones and display meetings of all users in the users local time zone
- Possibility to use AgendaX with its own user management system, for users accessing AgendaX on another (untrusted) domain where they don't have a Windows account
- Meeting booking control system:
  Possibility for a closed user group to book meetings as 'unchangeable'. When such a meeting is later

changed by the attendees in either Outlook or AgendaX, the closed user group will be notified of the changes. It's also possible to automatically revert back changes made to a meeting, so that a meeting remains completely unchangeable.

- New detailed weekly, monthly, and yearly views
- Possibility to define a closed user group that is allowed to modify everybody's meetings, regardless of their Outlook permissions
- Possibility to read and display only free/busy data vs. full meeting data
- Possibility to apply Outlook security to display full meeting data only for calendars with permissions, and free/busy data for calendars without permissions
- Possibility to read only meetings that are categorized, or categorized with certain categories, or to exclude meetings that are categorized with certain categories
- Possibility to apply filters on custom Outlook fields in the views
- Possibility to display pictures of users along with their Active Directory info
- Possibility to apply rules to automatically modify meetings based on Title, Category, non-categorized meetings, etc.
- Export to Excel
- Logging of meetings booked / modified through the web interface
